Fostering a Positive Clinical Learning Environment

THE ODYSSEY
HOMER

SIGNATURE EDITIONS

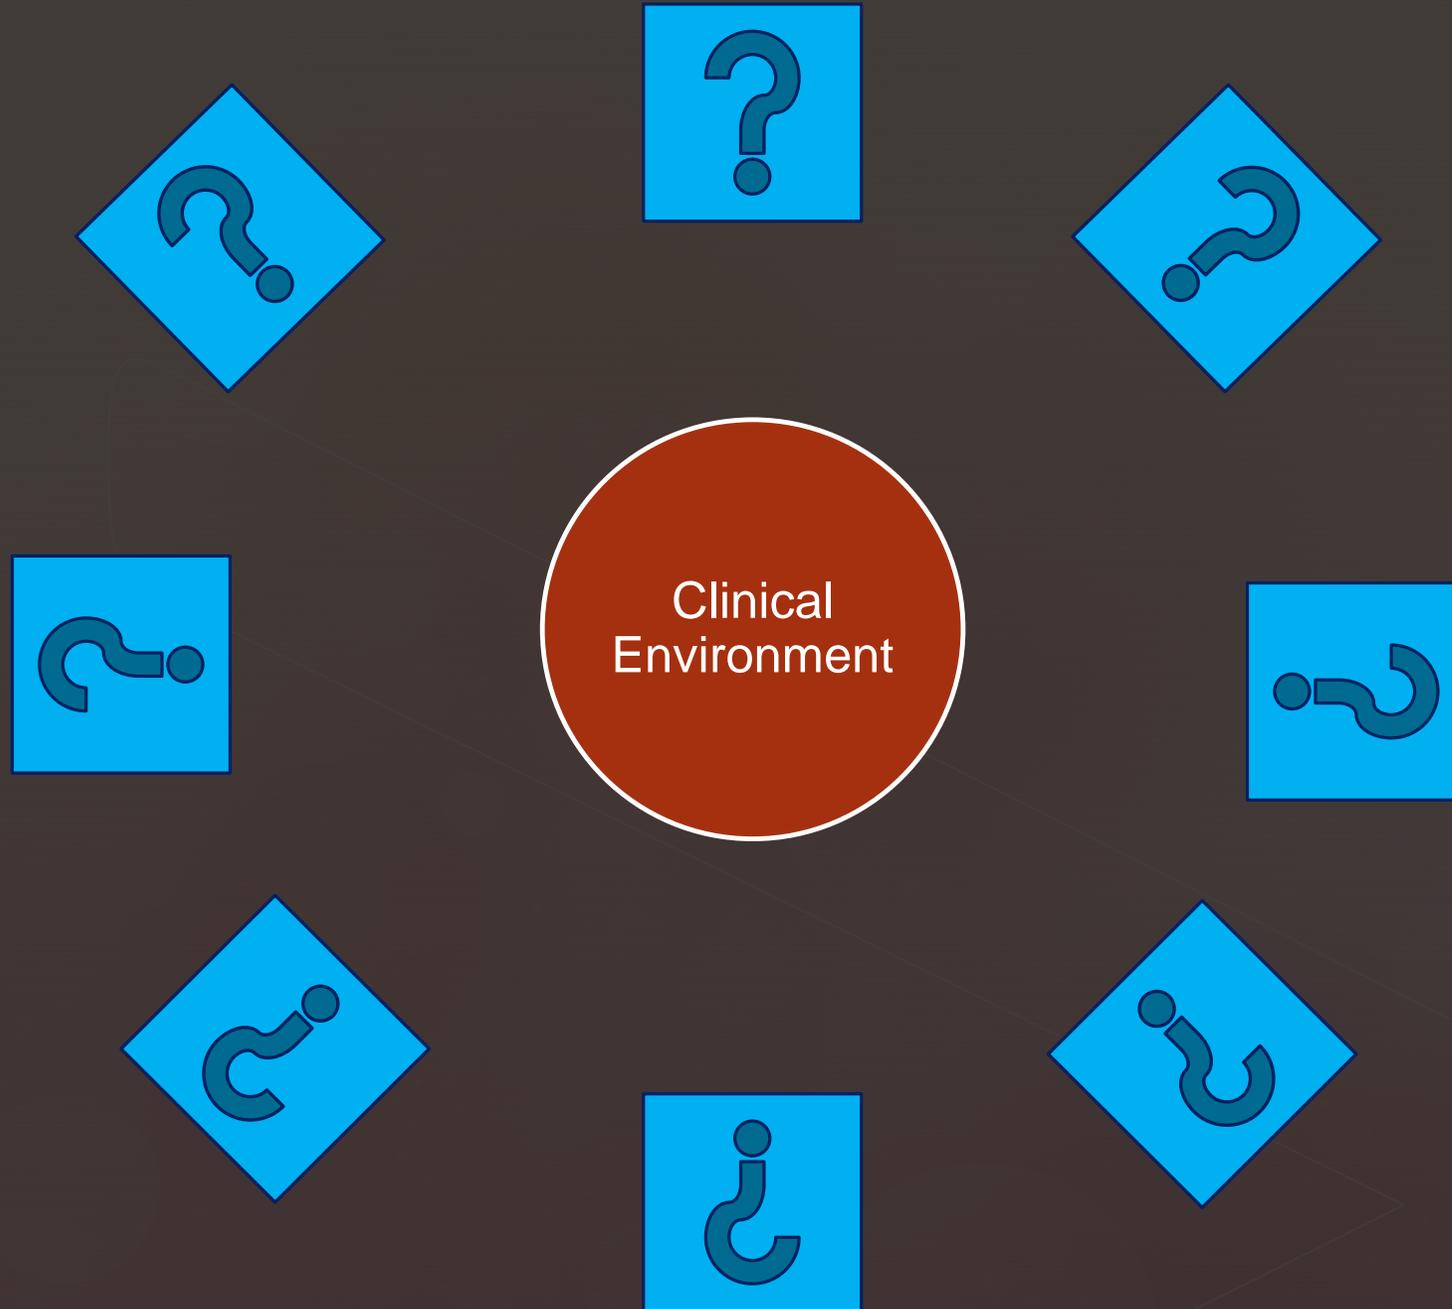

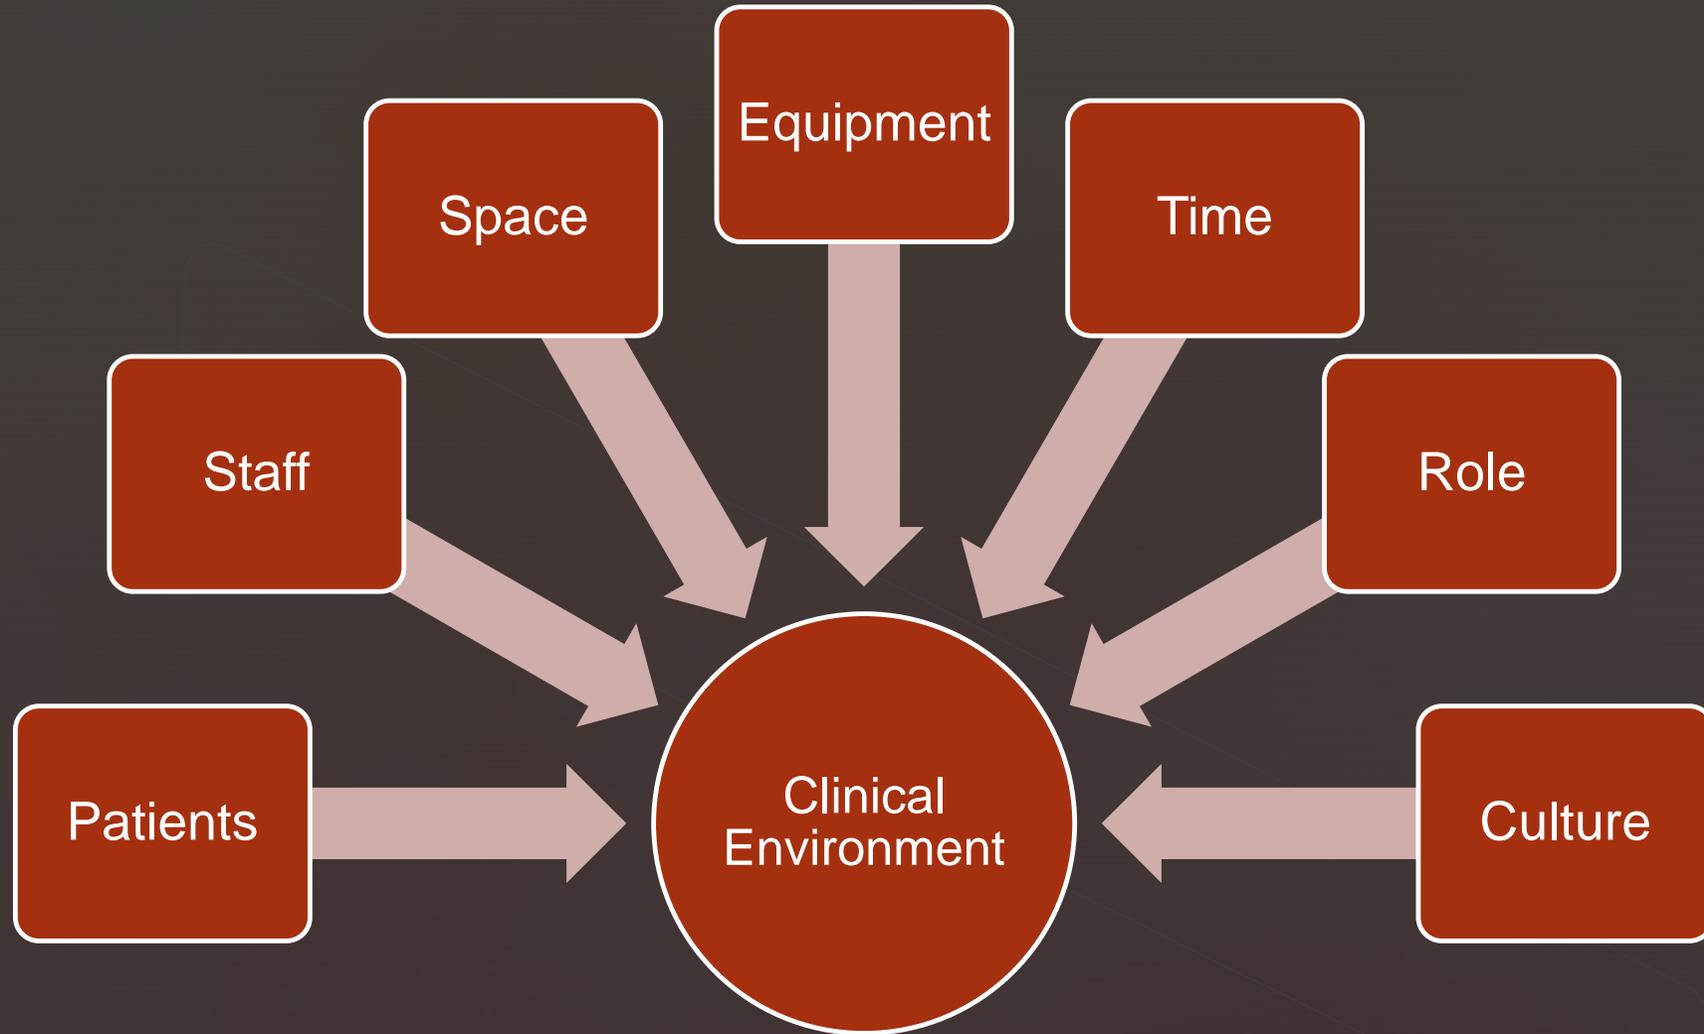

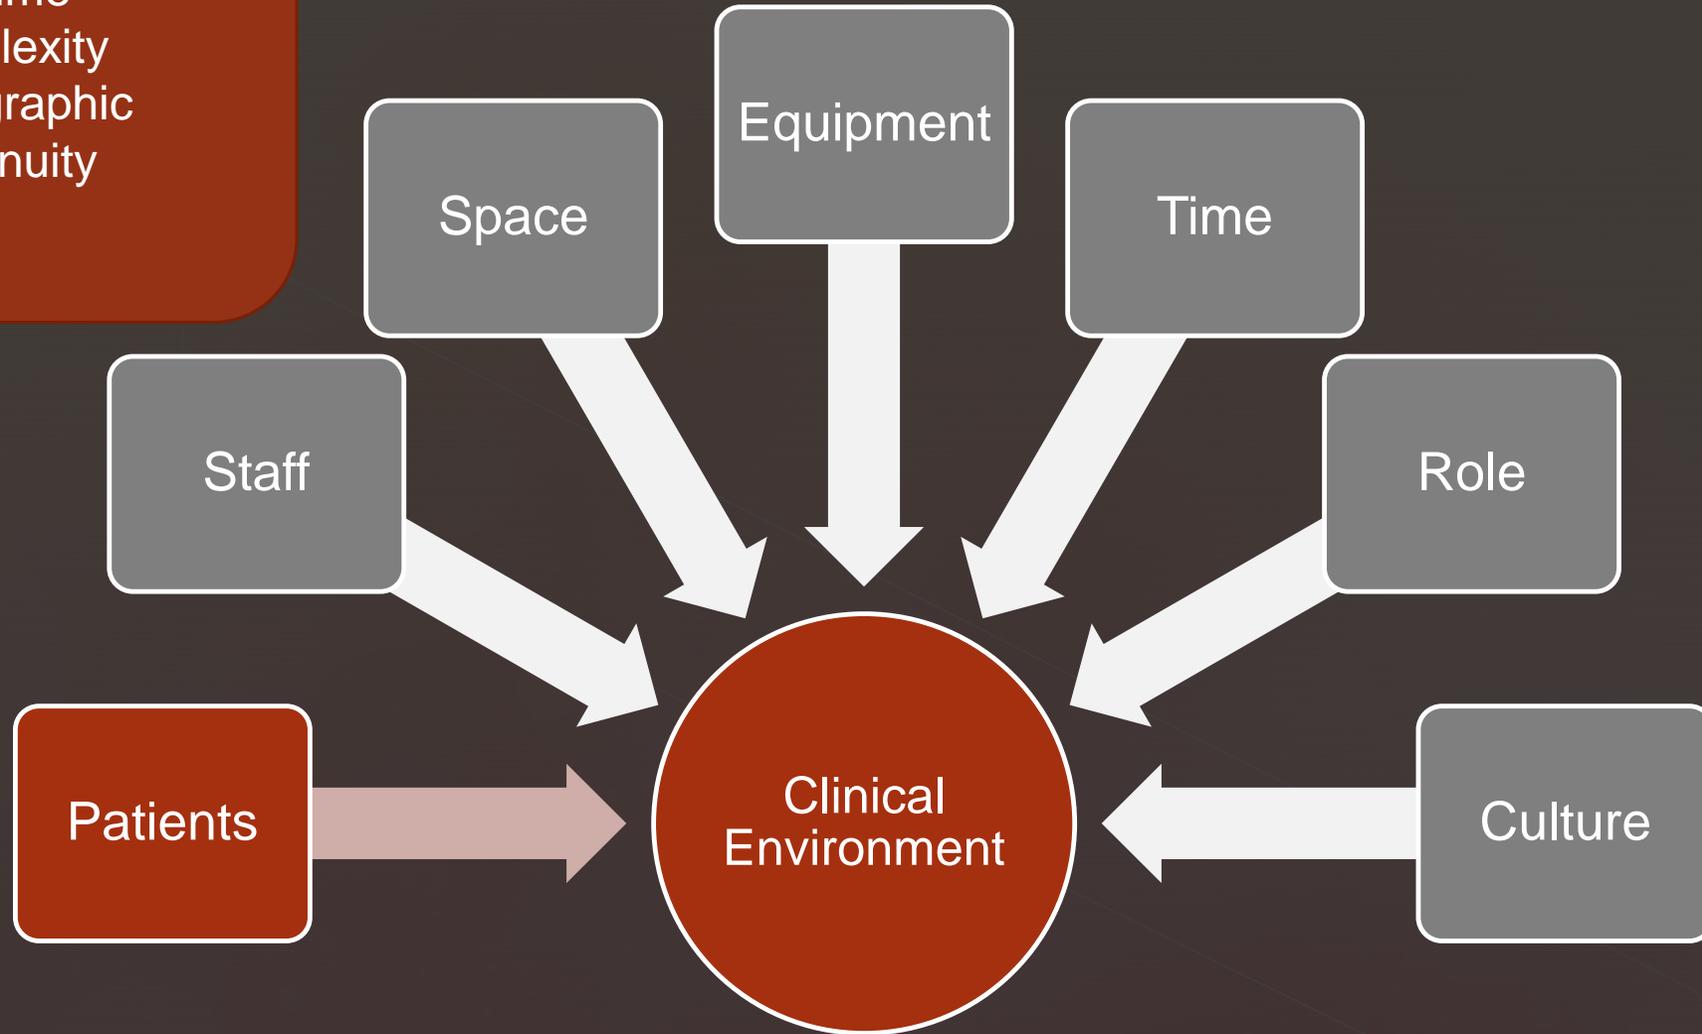

Objectives

- Describe the multifactorial sources of influence on the clinical learning environment
- Discuss learner preferences in mentorship qualities across various healthcare professions to articulate an effective mentor characteristic profile
- Illustrate developmental arcs of learners to highlight the need for adaptive mentorship
- Provide insight on relevant standards and simplified action steps to address them

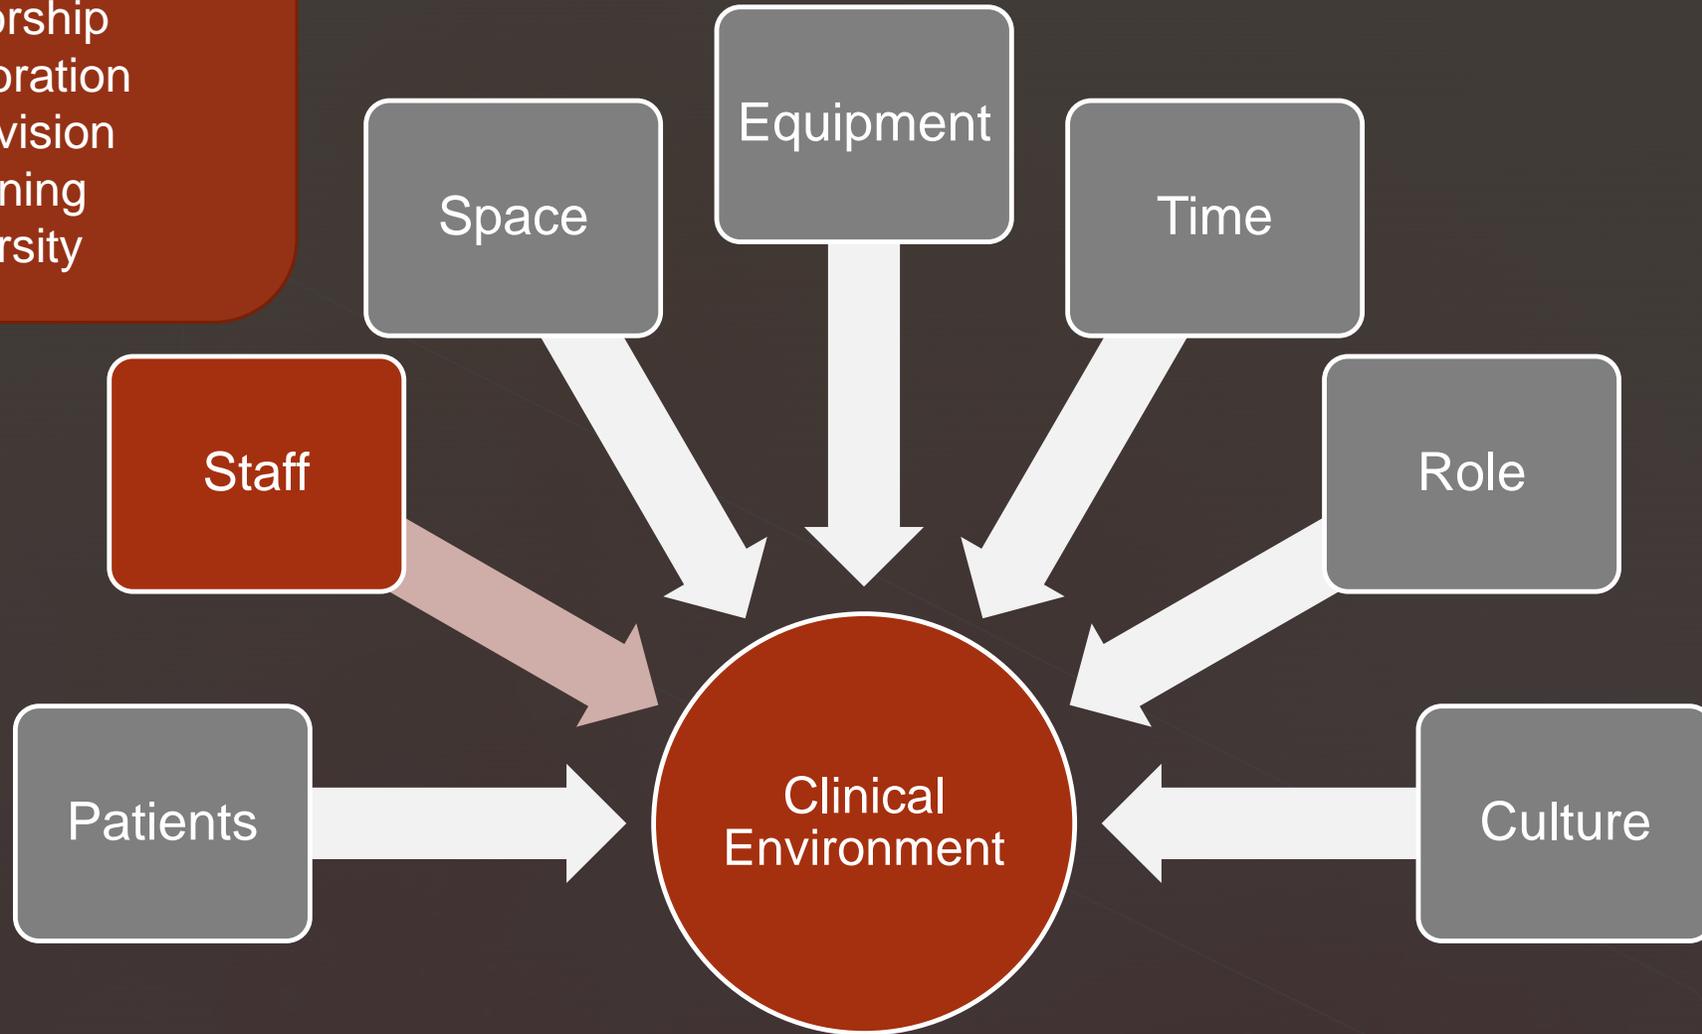

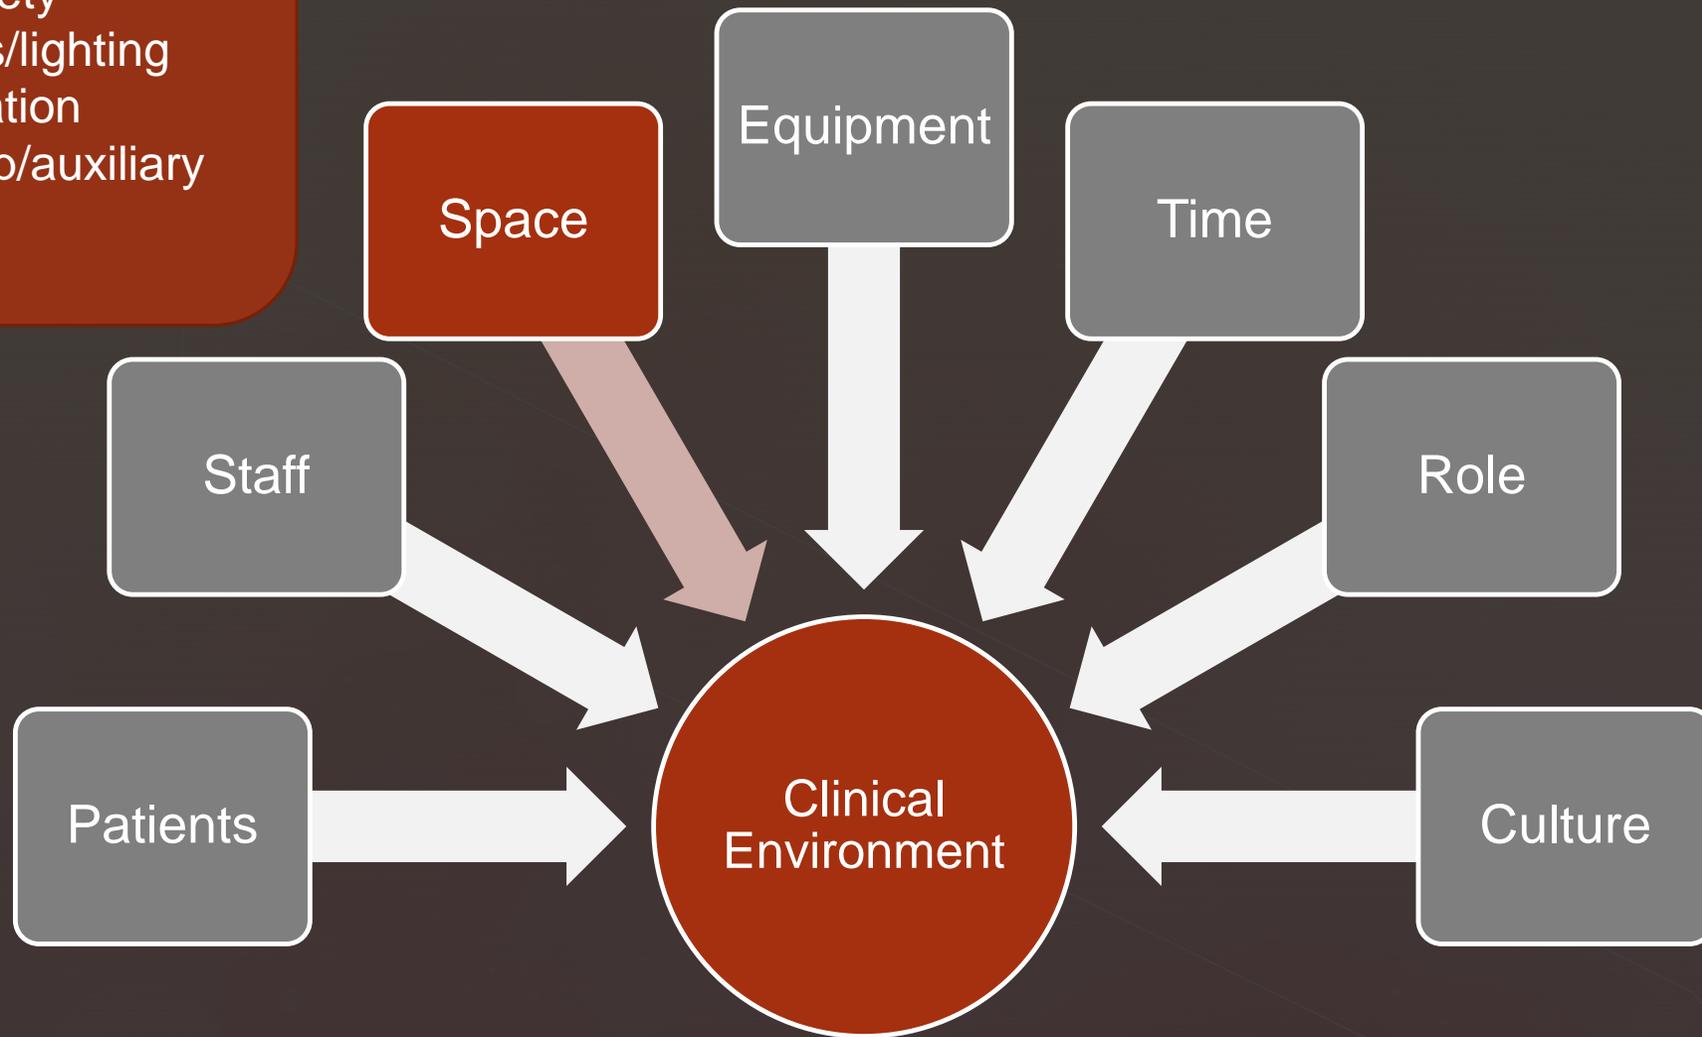

- Volume
- Complexity
- Demographic
- Continuity

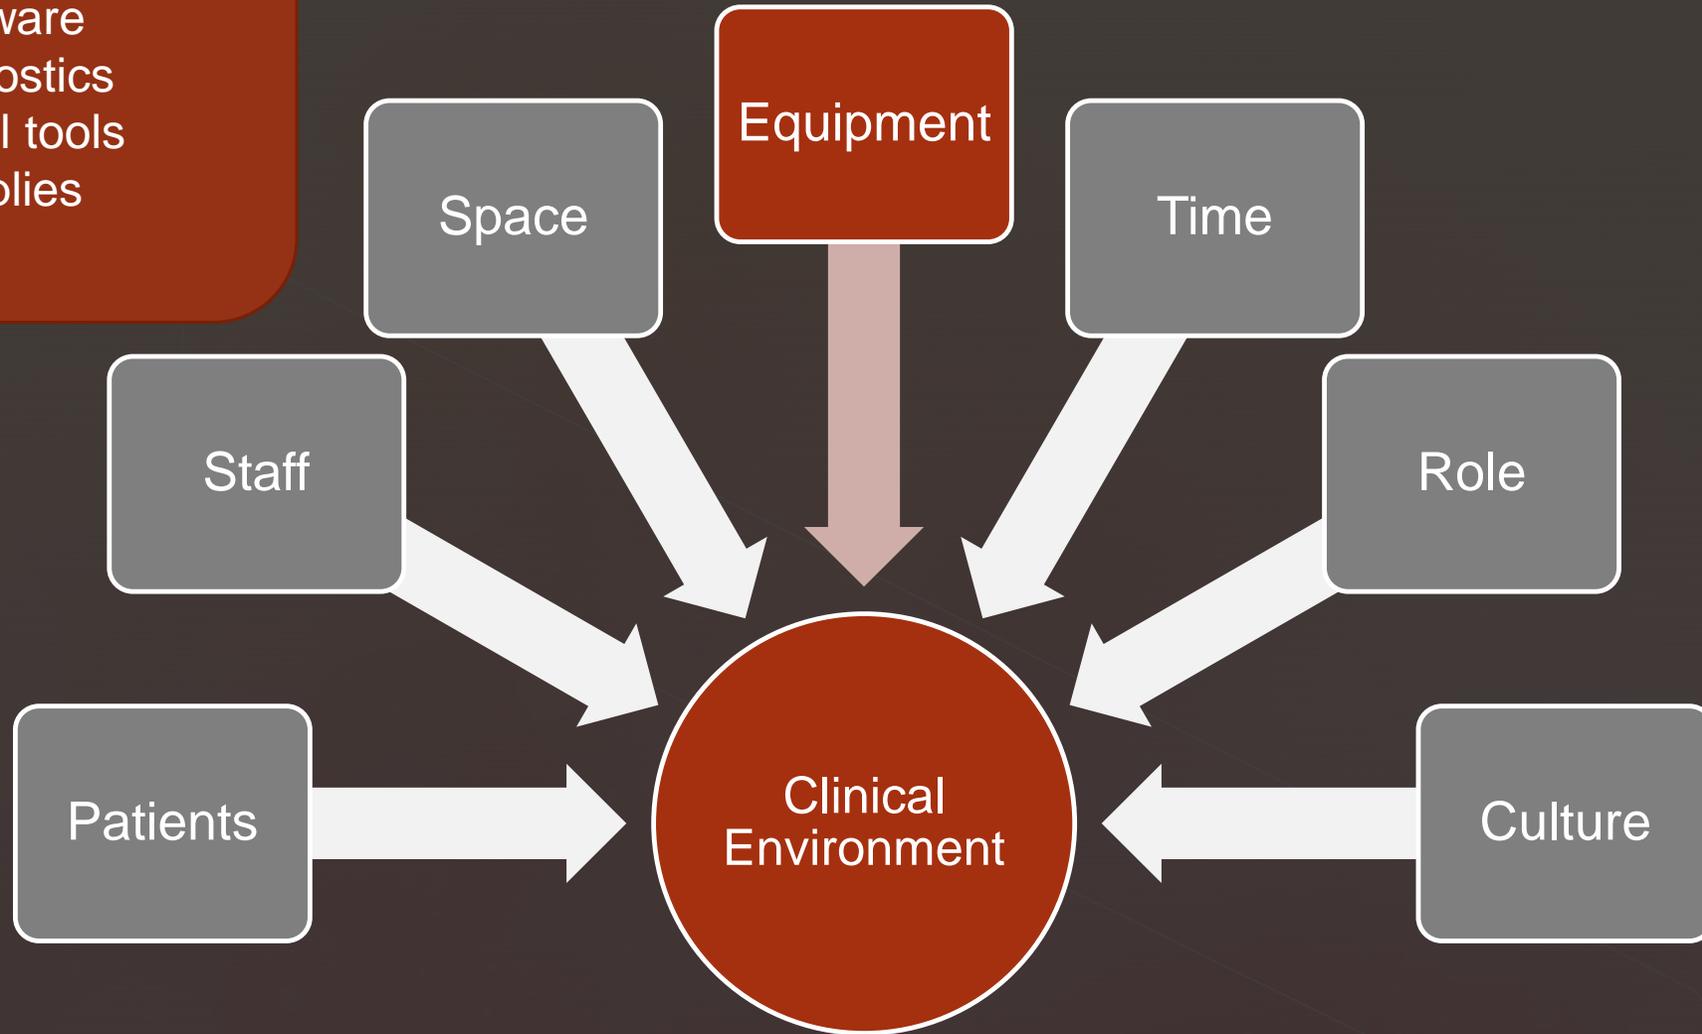

- Engagement
- Behavior modelling
 - Mentorship
 - Collaboration
 - Supervision
 - Listening
 - Diversity

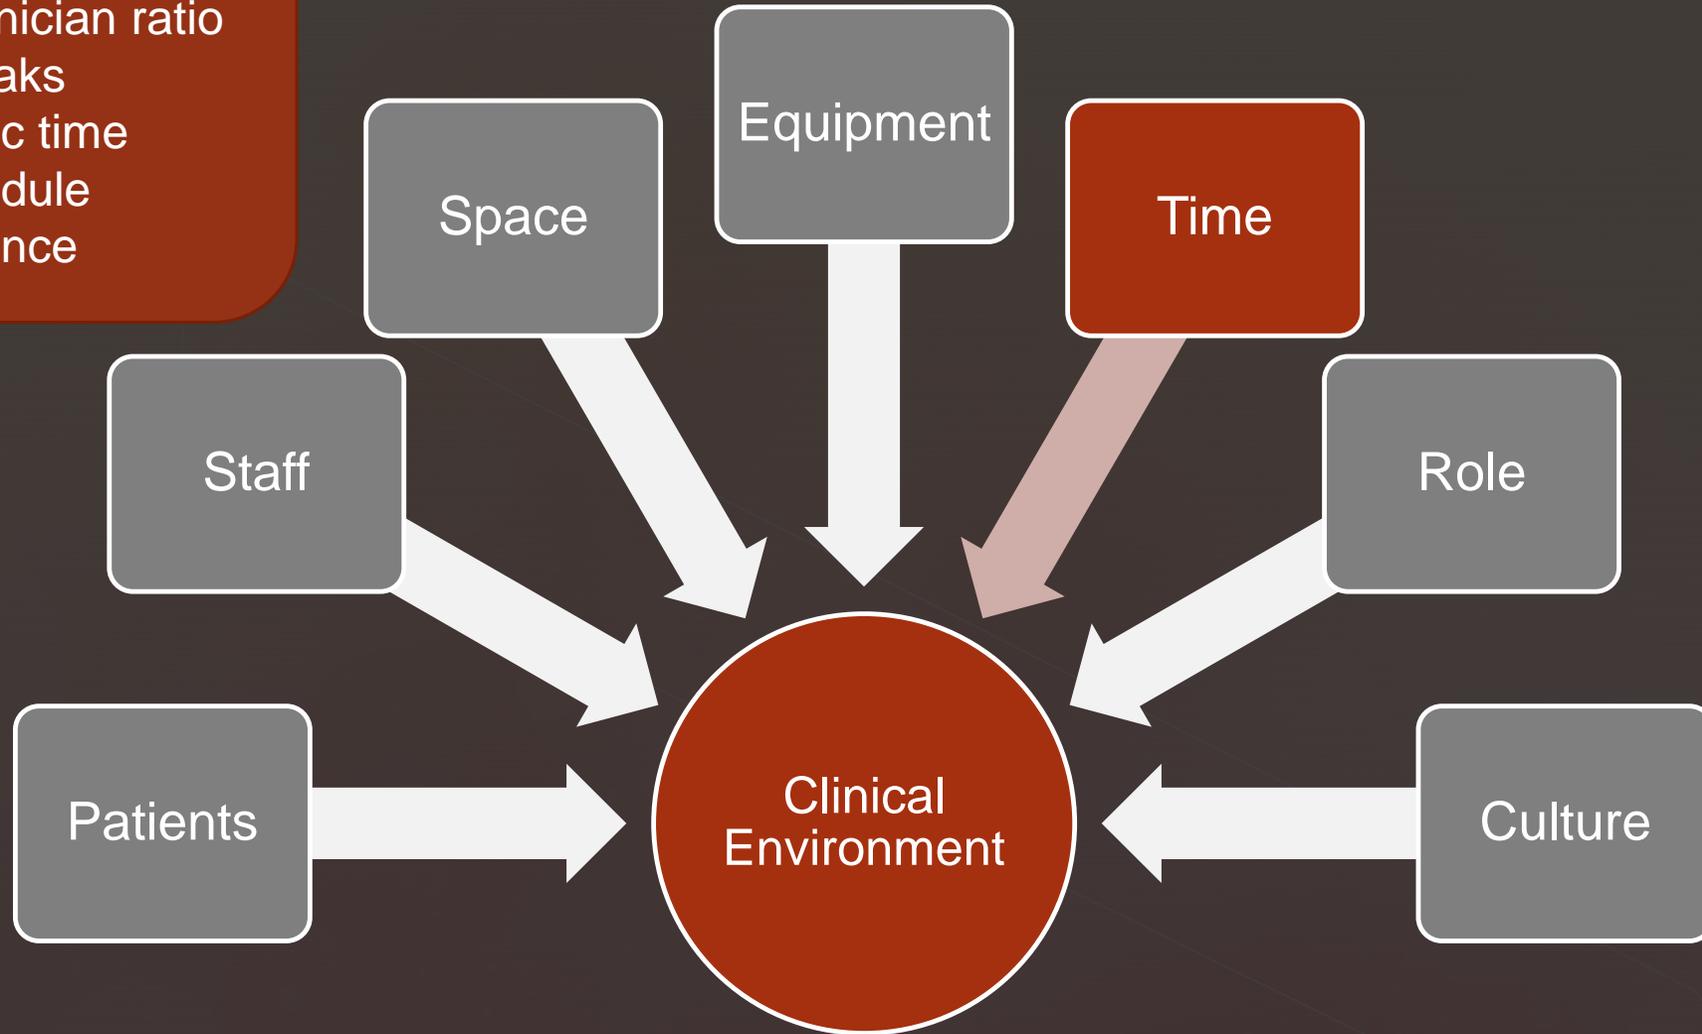

- Safety
- Windows/lighting
 - Location
- Base camp/auxiliary

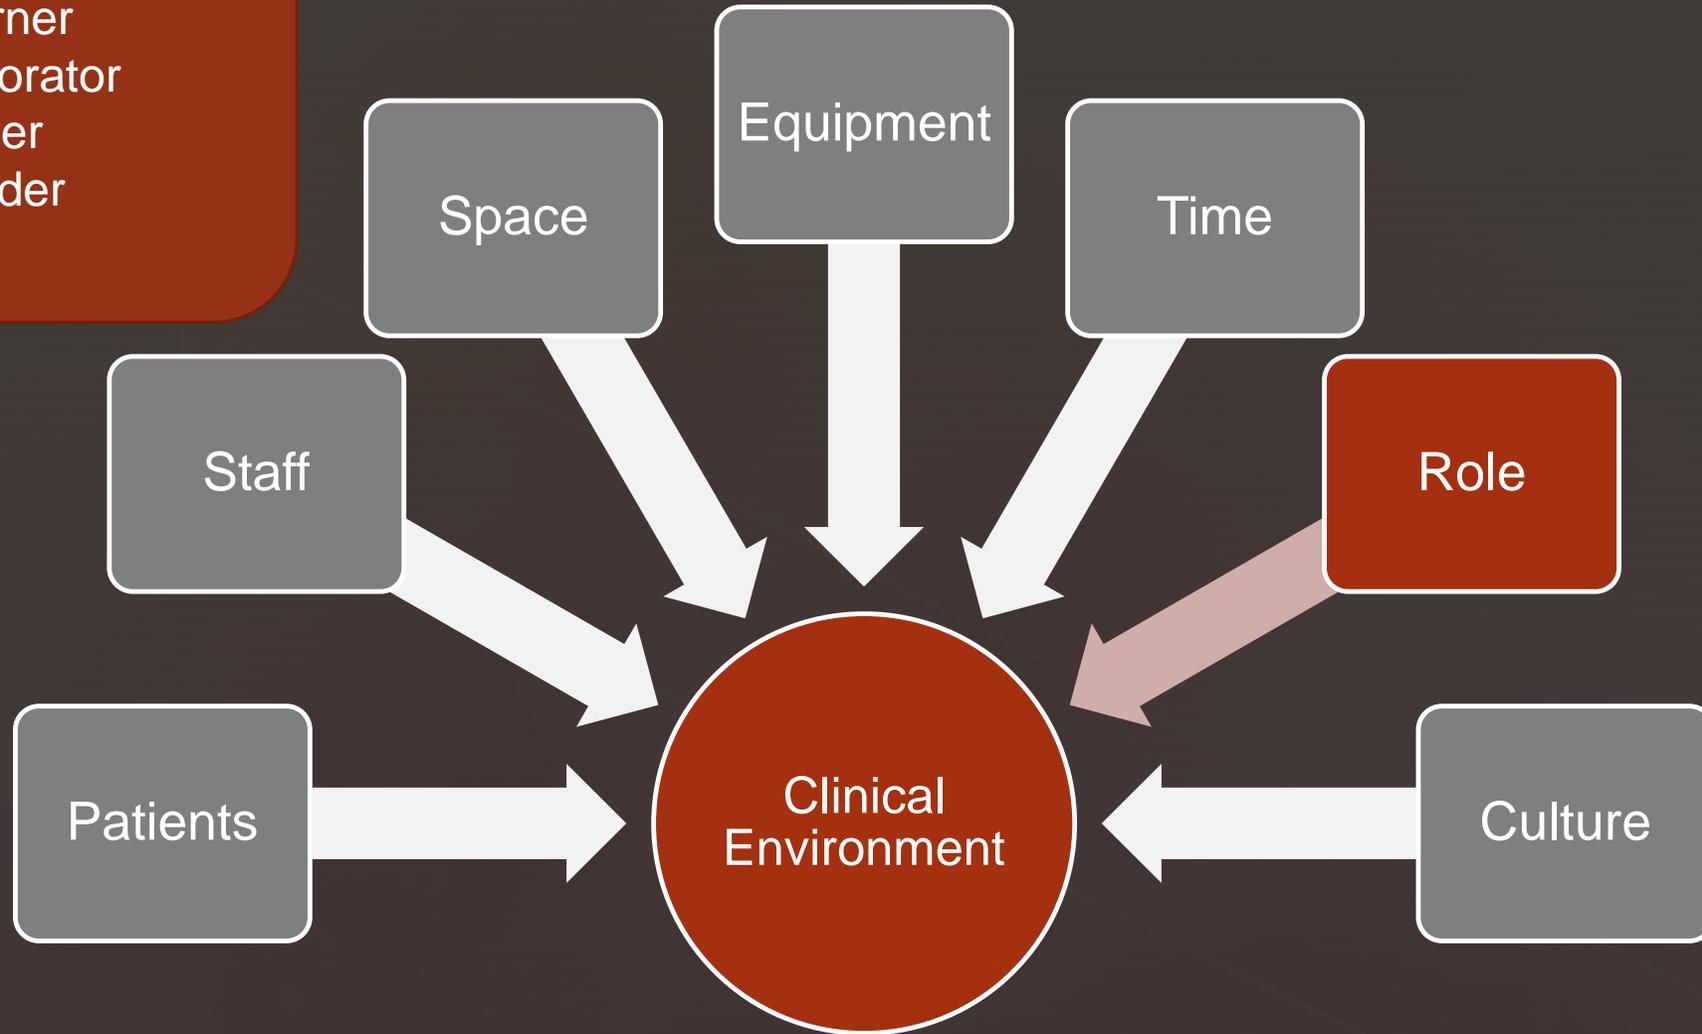

- Hardware
- Software
- Diagnostics
- Clinical tools
- Supplies

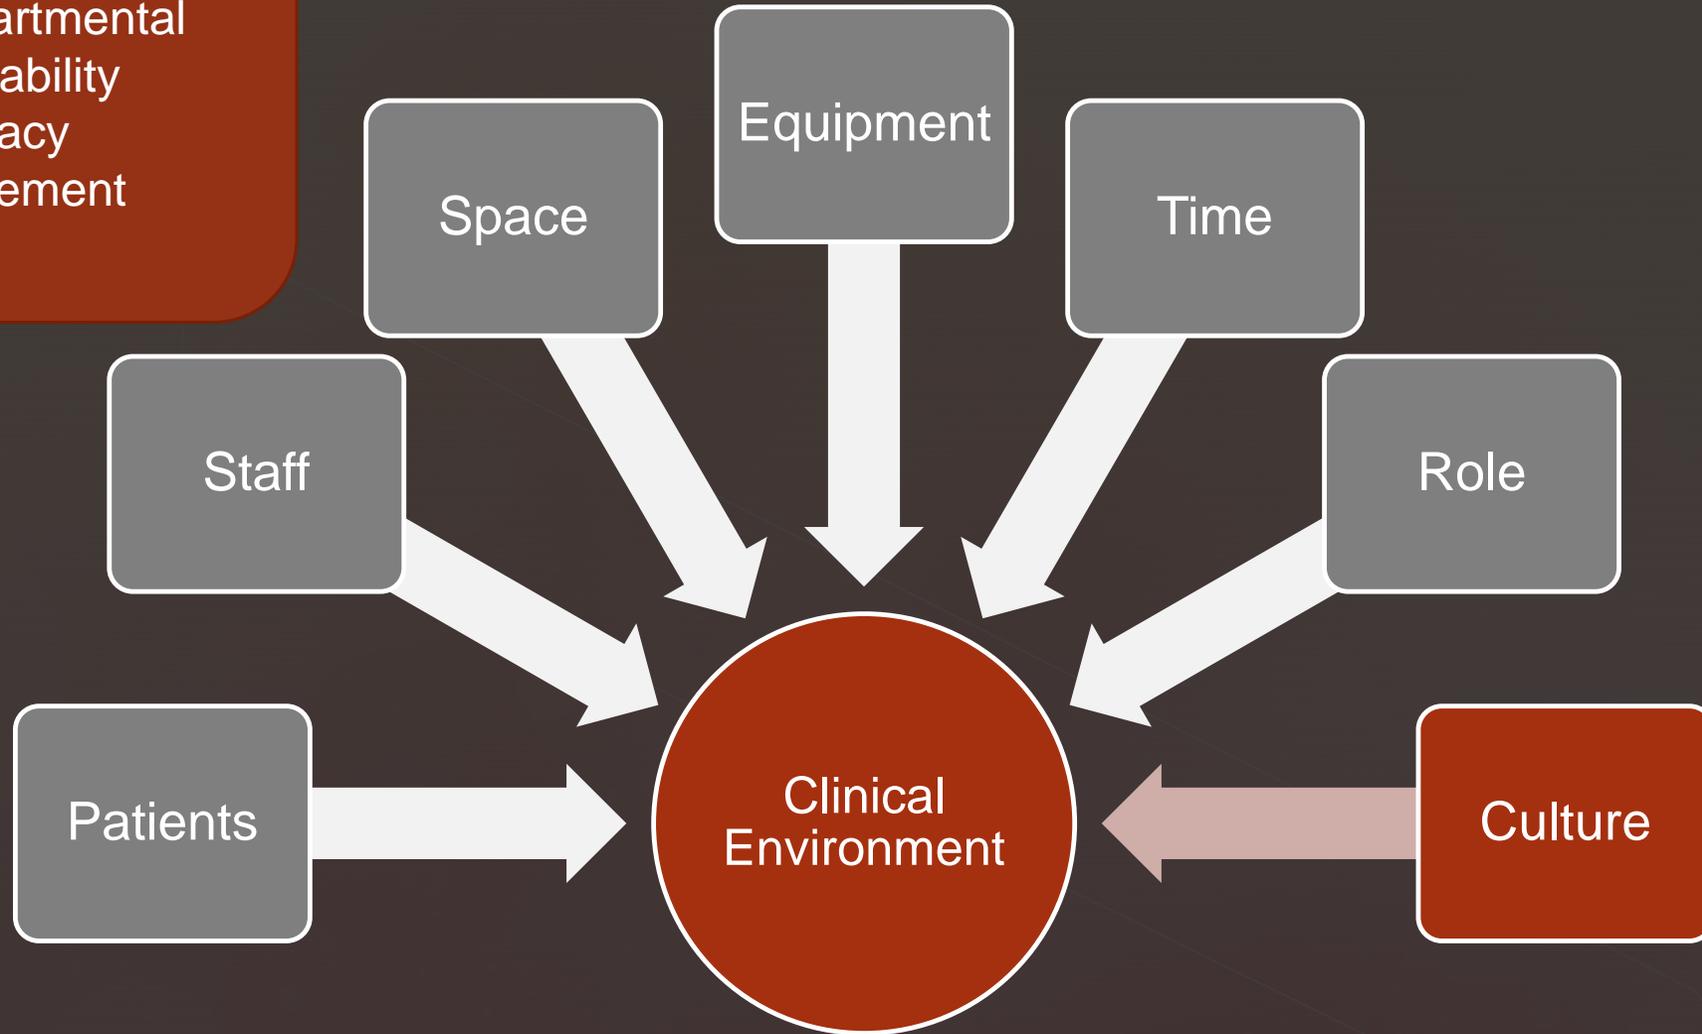

- Hours of operation
- Administrative time
- Patient : clinician ratio
 - Breaks
- Didactic time
- Schedule
- Balance

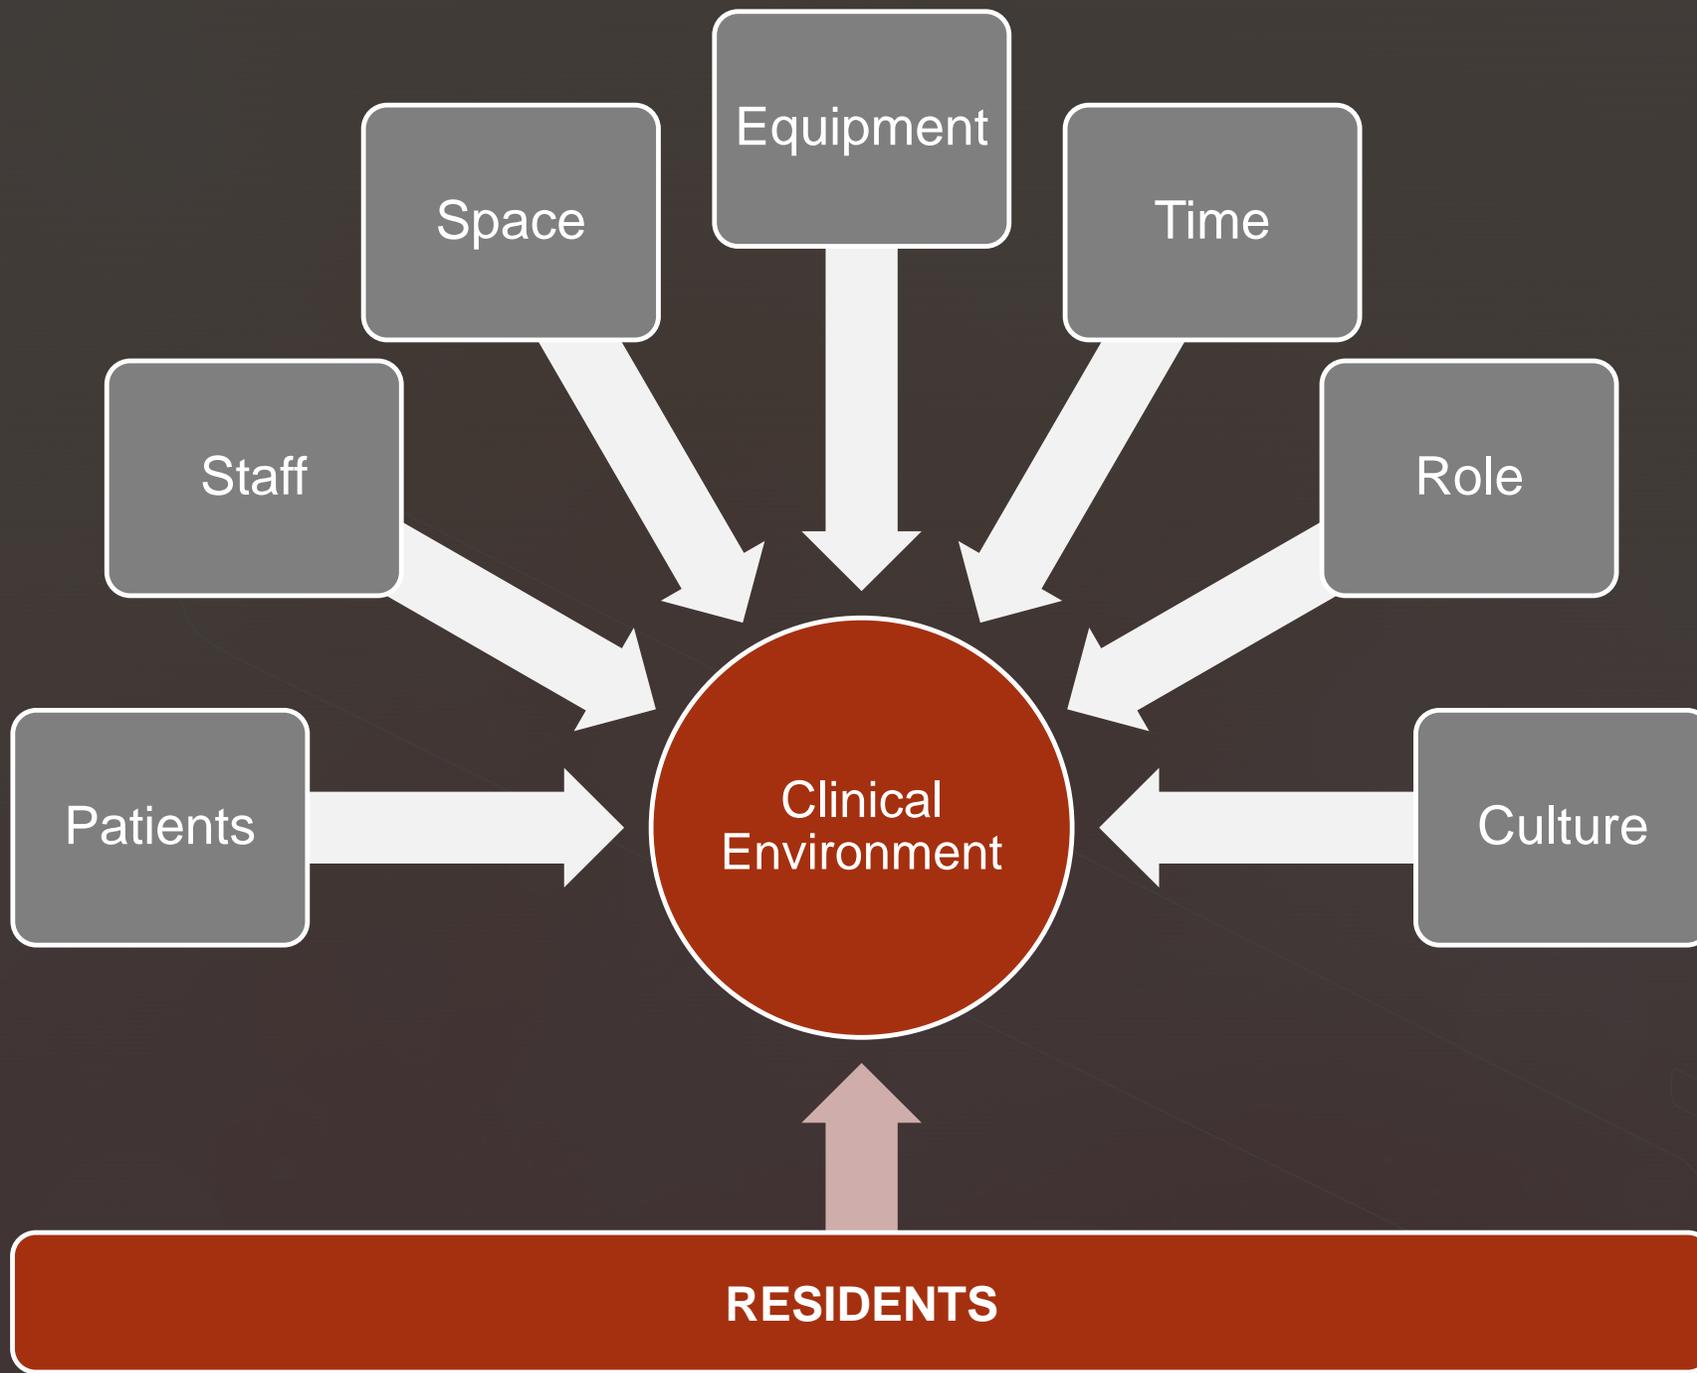

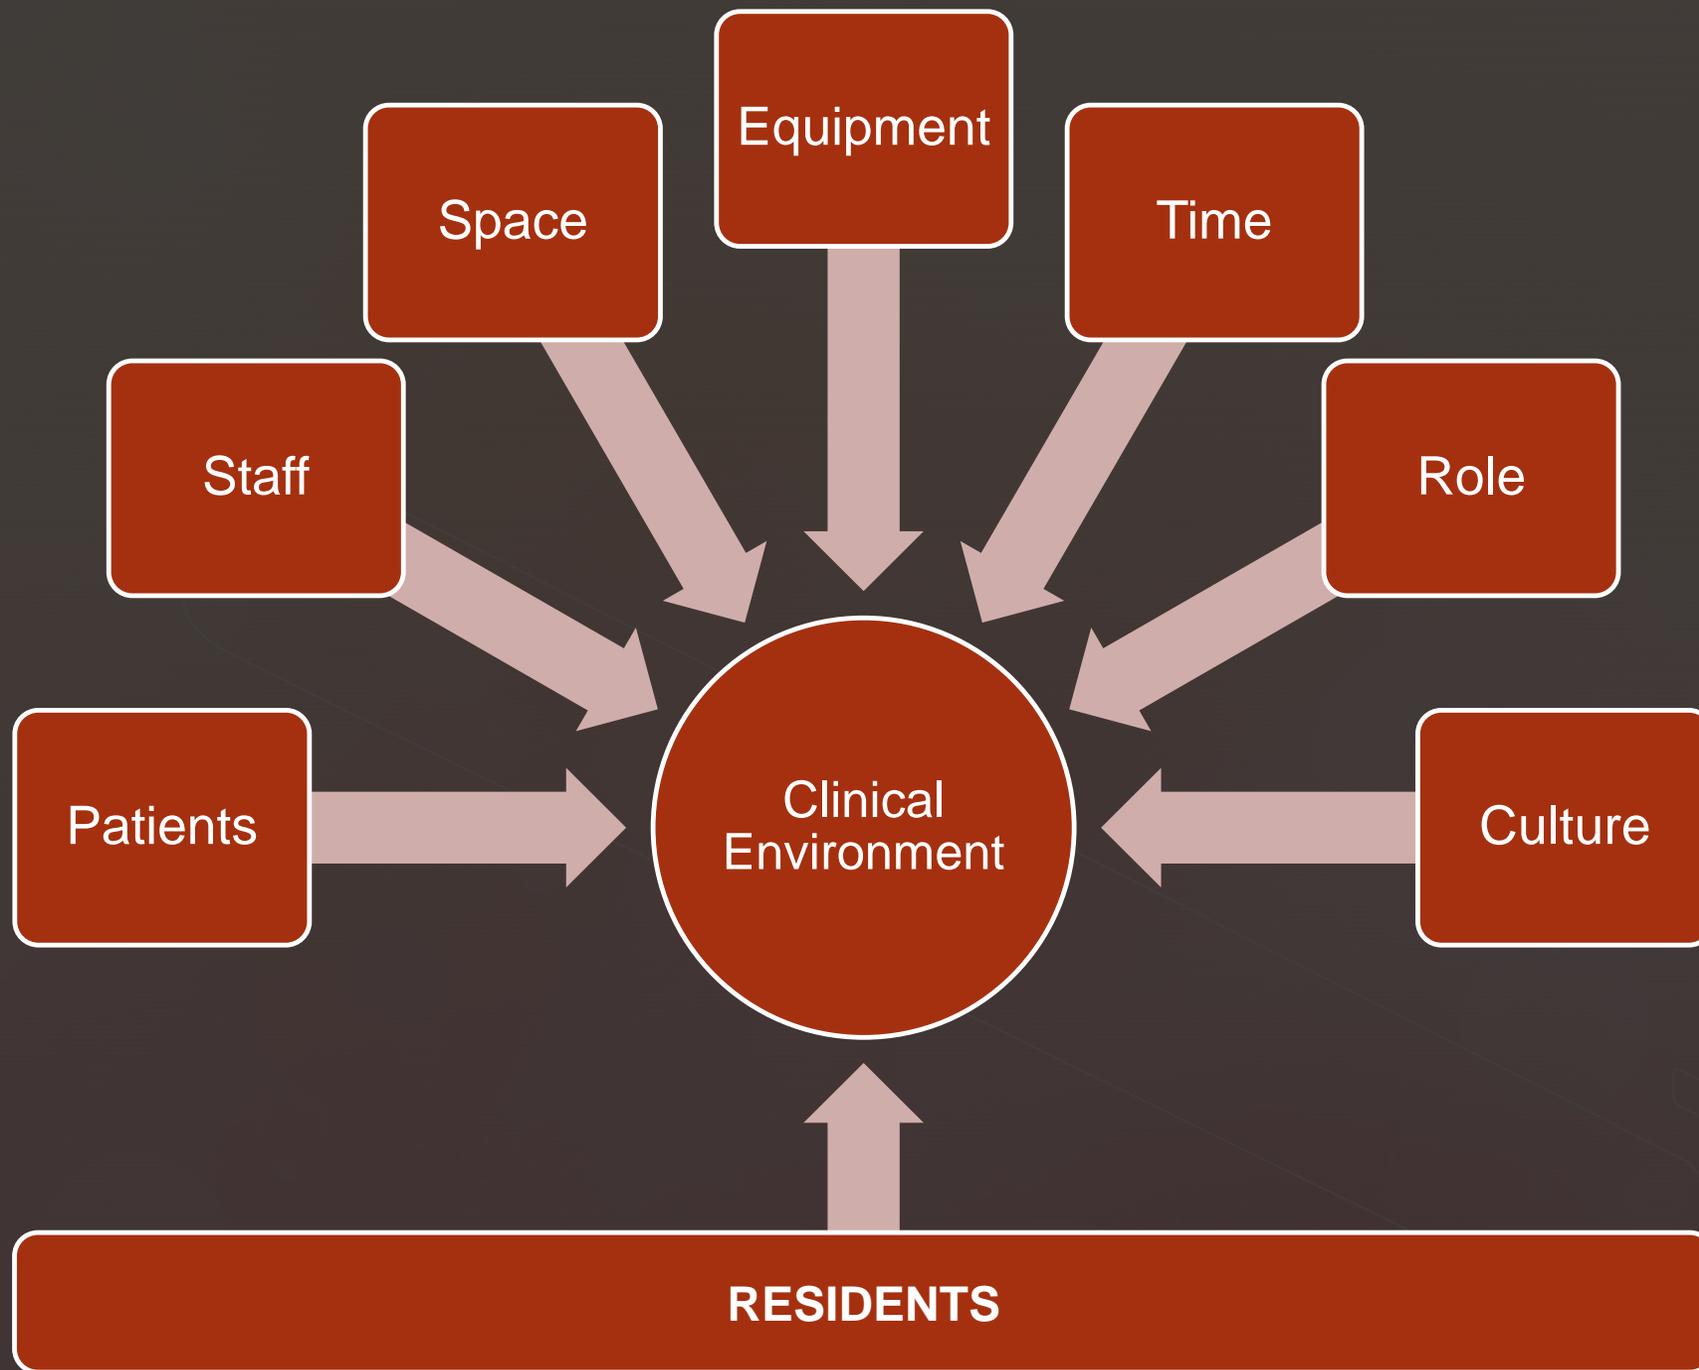

- Observer
- Learner
- Collaborator
 - Doer
 - Leader

- Inter-departmental
- Intra-departmental
 - Vulnerability
 - Privacy
 - Engagement

MENTORS

QUESTION

What makes a good mentor?

ANSWER

What does the mentee need?

Level 1

- Supervisees are high in motivation, yet high in anxiety and fearful of evaluation

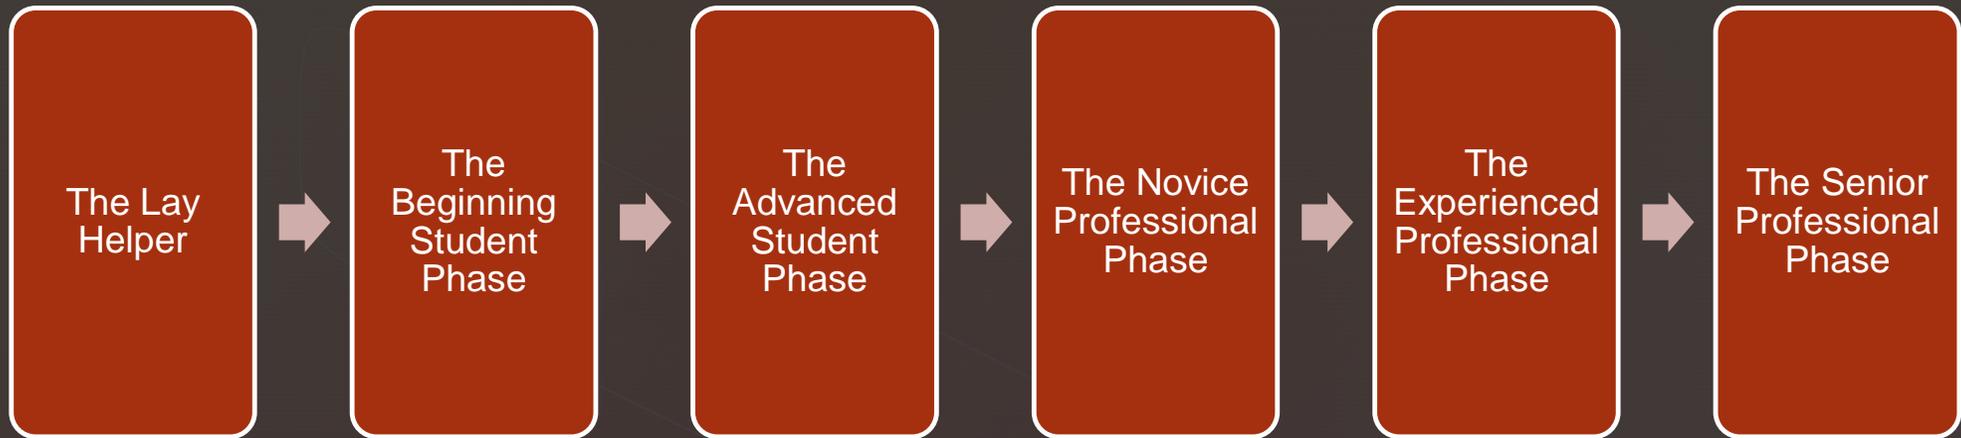

Level 2

- Supervisees experience fluctuating confidence and motivation, often linking their own mood to success with clients

Level 3

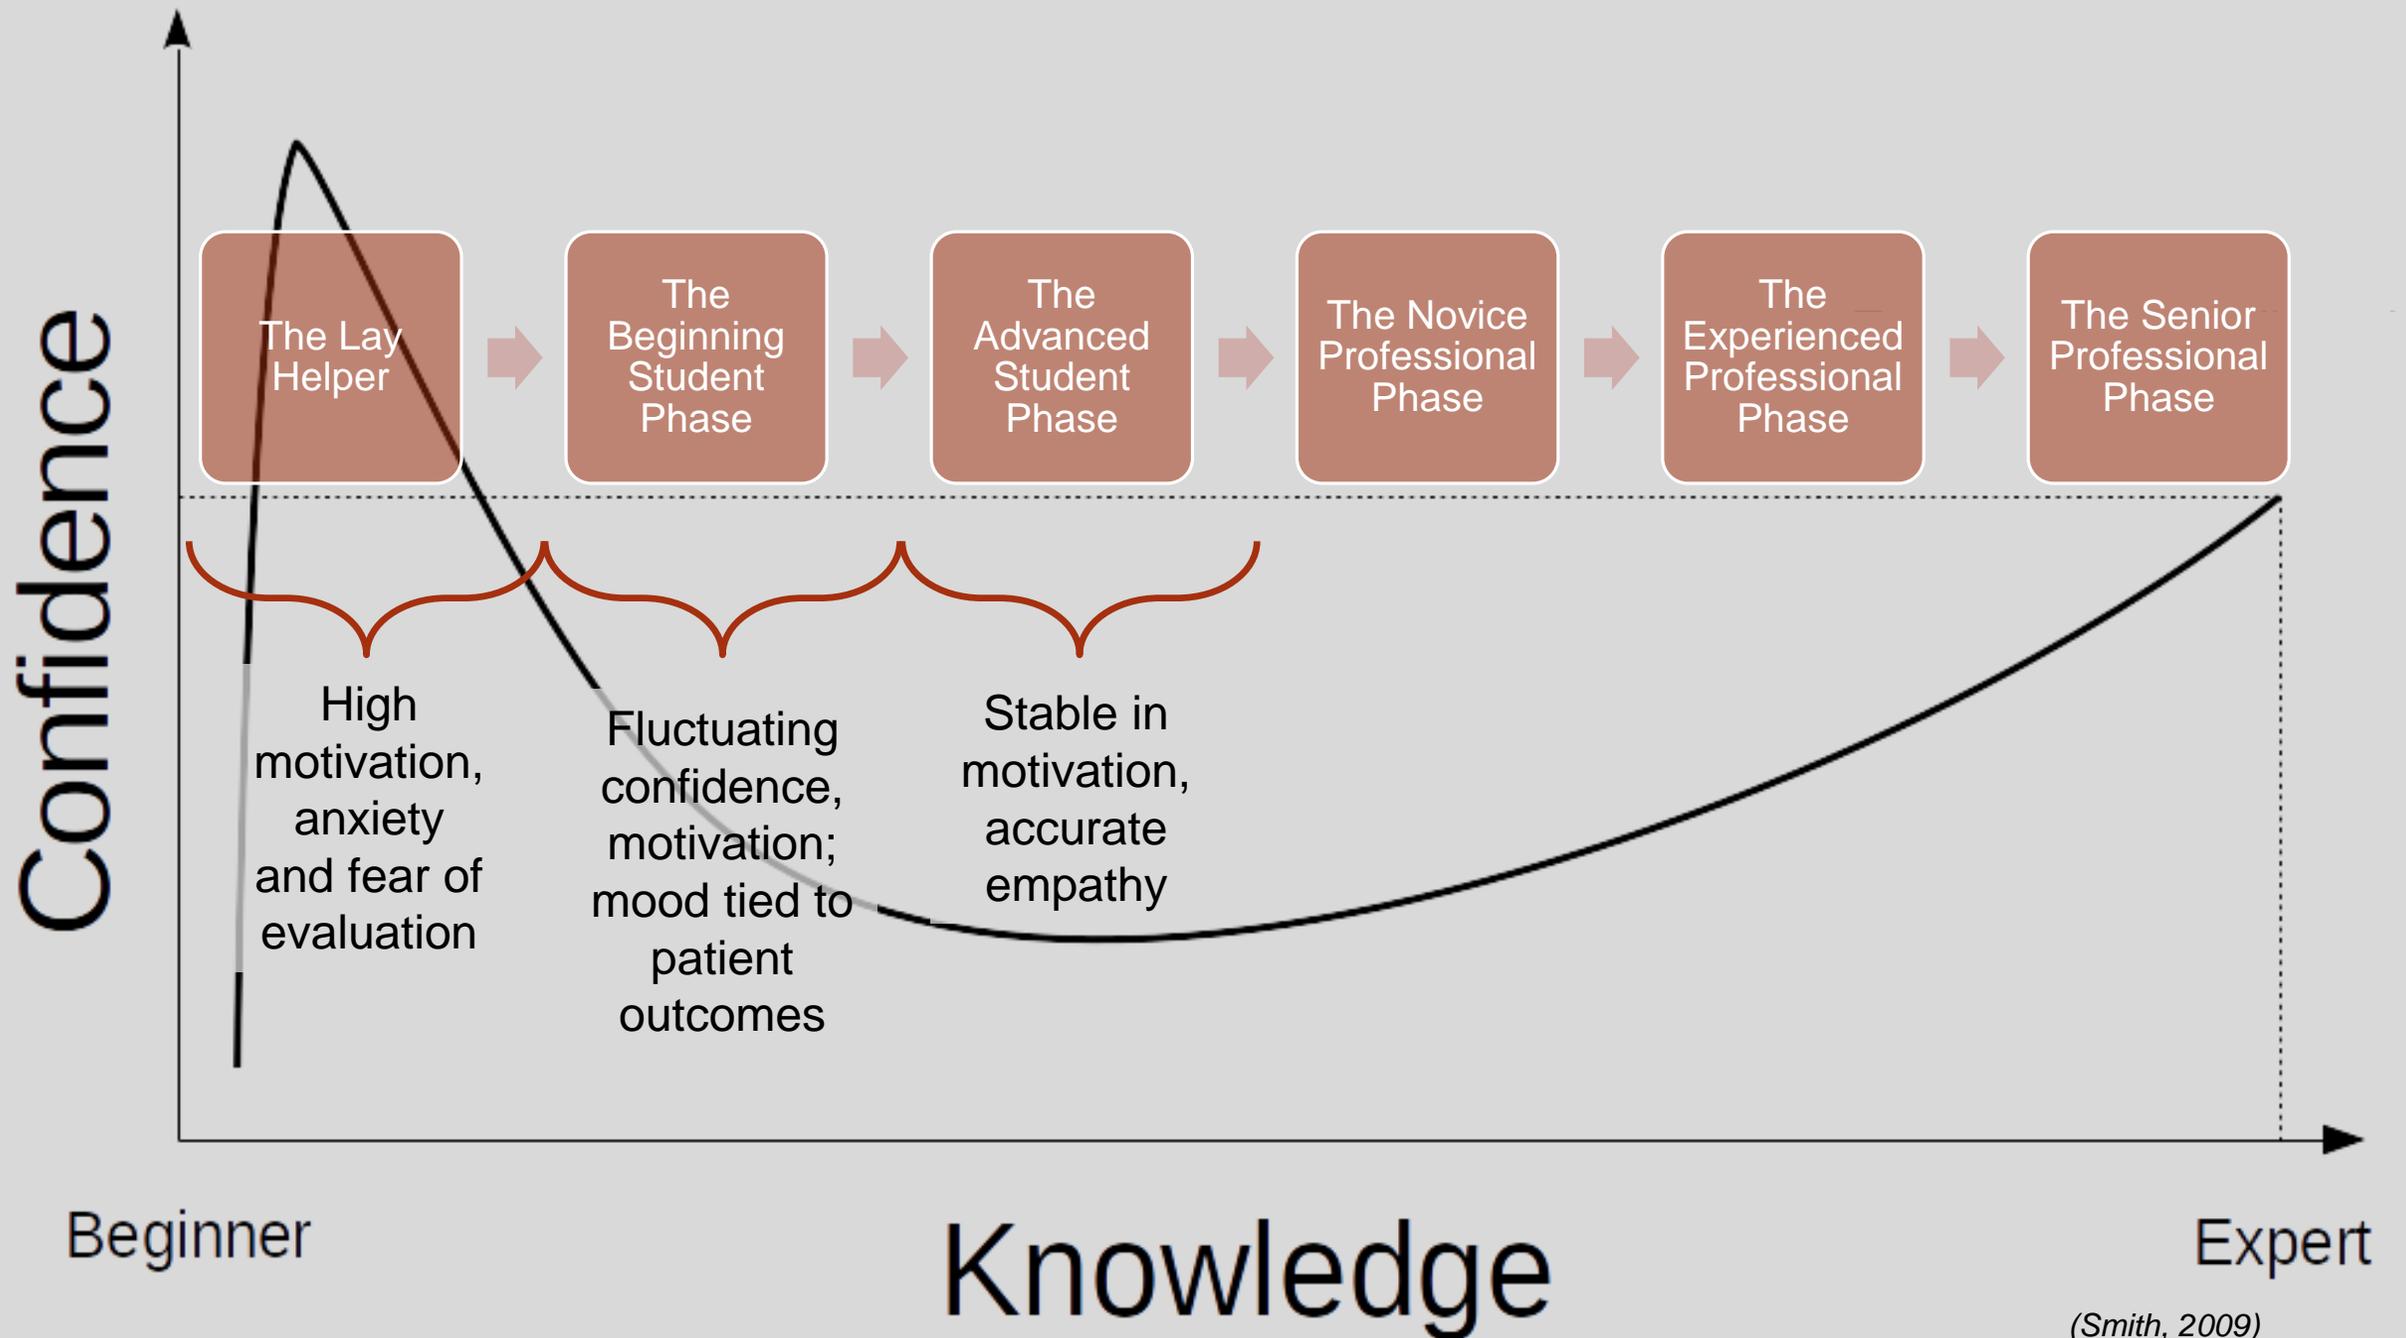

- Supervisees are secure, stable in motivation, have accurate empathy tempered by objectivity, and use therapeutic self in intervention

Integrated Development Model

Ronnestad and Skovholt's Model

1. Professional development involves an increasing higher-order integration of the professional self and the personal self
2. The focus of functioning shifts dramatically over time from internal to external to internal
3. Continuous reflection is a prerequisite for optimal learning and professional development at all levels of experience
4. An intense commitment of learning propels the development process
5. The cognitive map changes: beginning practitioners rely on external expertise, seasoned practitioners rely on internal expertise
6. Professional development is long, slow, continuous process that can also be erratic
7. Professional development is a life-long process
8. Many beginning practitioners experience much anxiety in their professional work. Over time, anxiety is mastered by most
9. Clients serve as a major source of influence and serve as primary teachers
10. Personal life influences professional functioning and development throughout the professional life span
11. Interpersonal sources of influence propel professional development more than “impersonal” sources of influence
12. New members of the field view professional elders and graduate training with strong affective reactions
13. Extensive experience with suffering contributes to heightened recognition, acceptance and appreciation of human variability
14. For the practitioner there is a realignment from self as hero to client as hero

Do provide constructive feedback

Do make yourself accessible to the mentee

Do maintain clear, distinct boundaries with the mentee

Do model professional behavior

Don't gossip about the mentee

Don't micromanage the mentee

Don't treat the mentee as free labor

CONVENIENCE

OPPORTUNITY

? !?

Section 1: Program Design and Quality - 4

TAKE HOME POINT – Develop an assessment plan to measure program delivery effectiveness

Section 2: Program Delivery - 10, 11

TAKE HOME POINT – Develop a clinical plan for resident exposure to sufficient patient volume across the full spectrum of the specialty area with progressive autonomy

Section 3: Institutional Organization & Administration - 21, 22, 25, 28

TAKE HOME POINT – Assemble a core (and affiliate) faculty that possesses contemporary expertise in the specialty area and ensure they have protected time to dedicate to their role in the residency

Section 4: Outcomes - 32, 33, 34, 35, 38, 39

TAKE HOME POINT – Develop assessment tools to measure resident progress towards advanced clinical practice
